Data analysis

Overall trend **Improving**

Recent in-app performance is improving; the average score across 9 sessions is 74%.

9 sessions between 6/9/2026 and 6/9/2026, averaging 74% at 4.8s per question.

Strengths

- Memory performance has remained consistent — Average 77% across 3 sessions, best 90%.
- Response times are steady — Averaging 4.8s per question.

Areas to watch

- Nothing needs attention from the recorded activity — Scores, response times and reminder adherence are all within the ranges this app watches for.

Suggested caregiver actions

- Continue the current routine of regular cognitive activities.
- Keep daily routines and reminder times consistent.
- Share this summary with the doctor or ASHA worker at the next visit.

This report summarises activity recorded inside the app. It is an observation of in-app performance, not a medical assessment or diagnosis. Please discuss any concerns with the patient's doctor or ASHA worker.
